Dear Hiring Manager,

I'm excited to apply for the Senior Product Design Engineer role at SharkNinja because it sits exactly at the intersection of how I like to work: early-stage problem solving, hands-on experimentation, and turning bold ideas into credible product directions. With over 13 years of mechanical engineering experience across complex electromechanical systems, I bring a strong front-end engineering mindset grounded in first principles, rapid prototyping, and learning through build-test-iterate cycles.

Throughout my career, I've thrived in ambiguous design spaces. I have sketched concepts, built functional rigs, pressure-tested assumptions, and used data to drive decisions quickly. I'm comfortable moving between CAD, the lab, and cross-functional discussions, and I enjoy collaborating closely with electrical, manufacturing, and product teams to explore system-level tradeoffs early. Whether hacking together proof-of-concept hardware or refining feasibility boundaries, I'm motivated by uncovering what *will* and *won't* work as fast as possible.

SharkNinja's culture of curiosity, speed, and "rarely satisfied" thinking strongly resonates with me. I'm excited by the opportunity to contribute hands-on engineering leadership to front-end innovation efforts that ultimately deliver intuitive, high-performance products customers love. I'd welcome the chance to bring my energy, creativity, and practical engineering instincts to the Ninja team.

Sincerely,
Szymon Skubisz
